

# Protect Our Kids From Medication Accidents

Each year, more than **70,000** children under 18 end up in the ER due to unintentional medication overdoses.

More than **80%** of ER visits for medication overdoses happen because children under 12 have taken medications on their own.

**One-third** of ER visits for children under 12 involve over-the-counter medication.

is a partnership between Janssen Pharmaceuticals, Inc. and the National Association of School Nurses
